

12 June 2020

Dear Parents/Guardians,

SAN YU ADVENTIST SCHOOL  
三育中小学

## EXPANDED SURVEILLANCE TESTING FOR COVID-19

We hope that your child has been adjusting well to the start of school.

1. Since 2 Jun, the government has expanded surveillance testing for COVID-19. We would like to share MOH's guidelines and what it means for our students.
2. Parents/guardians should accompany their children who are unwell, with respiratory symptoms like cough, sore throat and runny nose, to see a doctor and be assessed for Acute Respiratory Infection (ARI). If diagnosed with ARI:
  - Students (13 years and above) will be prioritised for COVID-19 testing and referred for testing at a polyclinic, designated GP clinic participating in the Swab-and-Send-Home initiative or Regional Screening Centre set up by HPB.
  - Students (12 years and below) will be assessed by the doctor as to whether a test is required, as younger children may require different clinical considerations than older children. Those who do not require a test will be issued a 5-day MC and should stay home. If he/she is still unwell at the end of 5 days, he/she should return to the same doctor for follow-up assessment and may be referred to KKH/NUH for a test.

Students will also be required to bring with them their student pass and another form of identification with their NRIC/FIN number.

3. Please note that there may be exceptions, depending on the professional judgement of the doctor.
4. Testing will also apply to school staff, complementing the other safe management measures put in place in our schools to safeguard student well-being. For more details, please refer to the MOE FAQs.

Yours faithfully,

Dr Shee Soon Chiew

Principal

SAN YU ADVENTIST SCHOOL  
三育中小学

## **FAQs on COVID-19 Testing due to Acute Respiratory Infection (ARI) Symptoms**

### **1. Do all students and staff need to get tested for COVID-19?**

Anyone who is unwell, especially if they display respiratory symptoms such as runny nose, cough or sore throat, should see a doctor.

Students (13 years and above), if diagnosed by the doctor to have Acute Respiratory Infection (ARI) and require COVID-19 testing, will be referred by the doctor to a polyclinic, designated GP clinic participating in the Swab-and-Send-Home (SASH) initiative or Regional Screening Centre set up by the Health Promotion Board to undergo a test.

Students aged 13 to 16 should be accompanied by a parent/guardian for the test. This facilitates consent taking and communication to both the student and parent/guardian on the precautions to take note of while awaiting the test results at home.

For students aged 12 and below, they will be assessed by the doctor on whether a test is required, as younger children may require different clinical considerations from older children. They may be issued a 5-day MC in the first instance, and be required to stay home. If they are well at the end of the MC period, they can return to school. If they are still displaying respiratory symptoms at the end of their MC period, they should return to the same doctor for follow-up assessment, and the doctor may refer them to KKH or NUH for COVID-19 testing.

### **2. Why is COVID-19 testing needed?**

Testing complements the other safe management measures we have put in place to safeguard the wellbeing and safety of teachers and students. This is to allow us to identify COVID-19 cases earlier and to quickly contain any potential spread in the school and community.

### **3. Is payment for the swab test required?**

The cost of the test arising from a diagnosis of an Acute Respiratory Infection (ARI) will be covered by the government. In this scenario, the relevant consultation, medication and investigation costs will be covered under the Flu Subsidy Scheme (for Singaporeans and Permanent Residents).
